How Gogo works

Watch how Wi-Fi takes flight

Congratulations, you're about to witness the birth of the world's first wireless broadband network for inflight connectivity. Watch as a series of simple cell towers are transformed into a revolutionary new form of entertainment — Gogo® — In air. Online.

Nationwide coverage

Gogo Internet operates on wireless signals provided by Gogo's Air-To-Ground network, a reliable network of cellular towers spanning from sea to shining sea. While The Gogo Network has wired the entire continental United States for skyward Wi-Fi, actual signal strength and coverage may vary by altitude and network traffic volume.

Technical specifications

Is Gogo fast? Is the sky blue? The Gogo experience is best compared to mobile broadband service on the ground — except with a whole lot more altitude. All you need is a Wi-Fi enabled device, a Gogo account, and a burning desire to access exclusive in-air experiences available only on Gogo.
